Wood's Double Cleaned, Treated Seed Grains

GROWN FROM REGISTERED OR CERTIFIED STOCK SEED 99% PURE

New Bags. High Germination

We Treat all Wheat, Oats and Barley to insure better stands and disease-free crops.

We grow many thousand acres from the finest Registered or Certified Stock. No crop is planted in a field where other small grain grew last season. All fields are carefully rogued and inspected for certification.

BARLEY TREATED. Sow 2 bus. per acre.

*Uncertified Only

Arlington Oats

High yielding both for grain and hay. They are more winter resistant than many varieties and can be planted later. They are disease resistant, grow off fast in the fall, have a wide leaf and easy to combine.

COLONIAL II BARLEY

Fulwood Oats

Outyielded all other oats in 5-year average of official N. C. Coastal Plains test. Also recommended in Virginia for February planting. In eastern Virginia fall or spring planting.

Fulwoods are nearer to the type of oat most desired by all farmers; shortest strawed oat entered in N. C. and Va. tests; they ripen uniformly; slightly earlier than Woodgrain. Our tests show they stand better on rich land, also under high fertility conditions than other varieties.

Woodgrain Oats

One of the most outstanding oats developed in recent years.

Excellent in uniformity, of ripening, standability, stooling and seed quality. Approximately the same maturity as Fulgrain. Especially recommended for mid-winter planting in Virginia; fall and mid-winter planting in the Carolinas. Can plant up to March 7th. Recommended for grain, hay or silage.

Earlygrain Oats

Earlygrains are two weeks earlier than Fulgrains and about five to seven inches taller; excellent for early hay, grazing or grain. Developed at the same time and by the same method that produced Fulwoods and Woodgrains. Earlygrains are not from a Victoria cross and therefore not susceptible to Victoria blight. They usually escape rust due to earliness. This variety has produced well in Eastern Virginia and is good for silage or hay when planted with barley or clovers.

Seneca Wheat

Is a twin sister of Thorne, identical except it yields more, has higher test weight per bu., best grain quality and is replacing it. It looks like Thorne, big, long, solid heads, copper color, medium tall, very stiff straw; resists storms, winter, mosaic and loose smut; stools well. Virginia recommends it. Low in lodging.

Thorne Wheat

Most popular wheat in the Upper South, is smut, mosaic, mildew and winter resistant. Stands up well, combines easy; large heads, big, plump grain, good milling quality. Recommended in North Carolina mountains.

Try Earlygrain Oats (2 weeks earlier than Fulgrain) and Crimson Clover planted together to be harvested for seed at the same time. Suggest using 1½ bu. oats with 12 lbs. Clover for excellent grazing and seed harvest.

ALFALFA SEED, Oklahoma Approved.

This variety was developed by natural selection in Oklahoma from seed introduced into that section many years ago. This approval by the certifying agency in Oklahoma indicates that the seed traces to fields of hardy origin. This seed should not be confused with Oklahoma Common which in some instances is not suited to Virginia. Recently released data by V.P.I. shows that over a ten year period the Oklahoma strain yielded more hay than that of Kansas origin in the Piedmont and Coastal Plains areas of Virginia.

KENTUCKY 31, The Most Popular Tall Fescue

Forms a thick, tough turf that holds up cattle when wet, withstands heavy tramping, ideal for golf fairways, athletic fields, parks, airfields, parade grounds or lawns where Ky. Blue dies out. Its strong roots open up hard sub-soil, adds organic matter, prevents erosion on steep banks, roadsides, terraces or waterways.

Conditions of Sale: The seeds, bulbs and plants listed here have been sold and are delivered upon the condition that if they are not true to name and kind or are not as otherwise described on the label or container, the seller's liability is limited to the purchase price thereof. If this condition is not satisfactory, they should be returned at once for proper credit.

Postpaid Prices apply to Va., N. C., W. Va., Md., Del., N. J., Penn.

Postage on Field Seed to Other States:

To S. C., Ga., Ky., Tenn., Oho, Ind., N. Y., New England and Mich., add 5c per pound to postpaid prices.

To Ala., Ark., Fla., Ill., Iowa, La., Miss., Mo., and Wisc., add 7c per pound.

To Texas, Okla., Kansas and Neb., add 9c per lb. to postpaid prices.

Wood's Bird Scatter Food

Attracts doves, quail, turkey and other game birds to your farm, ducks and geese to your marshes or song birds to your home.

In winter, especially February and March, little native food is left. Birds range far to find it. Help birds through this critical period by feeding **WOOD'S BIRD SCATTER FOOD**. It furnishes nourishment and warmth in the coldest weather. Birds never forget where they found food when they needed it.

Birds, like humans, need a variety of foods to keep them healthy and able to withstand the hardships of winter. Our formula has a wide assortment of ingredients, all beneficial and relished by game birds. It has no weed seed to grow the next summer.

Feed Wood's Bird Scatter Food regularly during cold winter months, especially during snows.

PLANTING AND CARE OF A LAWN

The first requirements for a lovely lawn is the preparation of a good, firm seed bed. The soil should be plowed or spaded when it is dry enough to work well. It should be pulverized to a depth of five inches. Remove stones and roots.

On each 100 sq. ft. (10x10), dig in 5 lbs. lime, 5 lbs. fertilizer (such as Agrico) and a soil conditioner like Hyper-Humus Peat Moss, compost, or 5 lbs. of organic plant food like Sheep Manure. Rake smooth.

Broadcast seed evenly. Cover lightly with a rake. Roll or pat firm. Water with fine spray. Soak thoroughly.

Each spring and fall fertilize with half the above amounts. For bare spots and under trees cut close, rake surface soil loose, broadcast fertilizer and seed heavily. Roll firm, then water until thoroughly wet.

Cut regularly when 2½ inches high. Don't cut shorter than one inch. In hot weather don't cut shorter than 2 inches.

Don't remove clippings unless long and heavy. They add mulch and fertility. Water in evenings during hot, dry weather. One good soaking is much better than several sprinklings.

Wood's Permanent Pasture and Hay Mixtures

Sow 25 lbs. per acre. 100-lb. bags, \$32.00 5-bag lots, \$31.50

- Pasture Mixture 1, for light gravelly or sandy soil
- Pasture Mixture 2, for good loam or clay soil
- Pasture Mixture 3, for moist bottom land
- Hay Mixture 6, for light gravelly or sandy soil
- Hay Mixture 7, for good loam or clay soil
- Hay Mixture 8, for moist bottom land

Southern Permanent Pasture and Hay Mixture 12 produces tremendous yields of the finest pasture and hay on both light and heavy soils in the Southern Coastal area.

Experiment station tests show yields of pasture and hay increase as more seed per acre is sown, up to 25 lbs. and as more different compatible clovers and grasses are added.

They concluded: "Using more than one legume in a mixture is a good insurance investment because species differ in adaptability to soil, climatic and biological growth factors."

Our mixtures proved superior for 4 generations contain 6 grasses and 8 legumes, are well balanced, cannot bloat. Nitrogen from legumes keeps grasses dark green and vigorous.

Contains Ladino, Red Clover, Alfalfa, White Clover, Alsike, Ky. Blue, Red Top, Ky. 31 Fescue, Rye Grass, Timothy, Orchard, etc.

How to Fertilize and Seed a Pasture

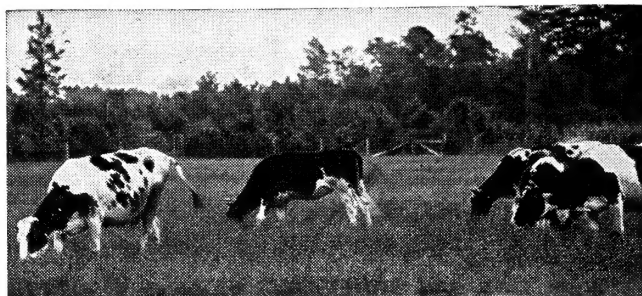

If the field has not been limed recently plow or disc in about a ton per acre before seeding. Deep roots withstand droughts. Encourage deep root growth by plowing down one-half of the fertilizer. Harrow in the rest just before seeding. Use 2-12-12 on heavy or rich soils. Use 5-10-10 on light or poor soil. Up to 1,000 lbs. per acre pays.

The secret of good stands is seed shallow on firm seed beds and press the seed to the soil. Grass and clover seedlings have short roots and must catch hold quickly or die. They smother out if covered over one-fourth inch on heavy soils or one-half inch on light sandy soils. Before planting, harrow and roll until seedbed is firm. Harrow the seed in very lightly then press firm with cultipacker or roll.

Sow 25 lbs. per acre in early fall so the seedlings can grow deep roots to withstand winter freezing and thawing. In the Piedmont or Mountains sow our Mixtures 1 to 8 to suit your soil. In Coastal Plains sow our Southern Mixture 12.

Renovating Worn Out Pastures or Broom Sedge Wasteland, disc or harrow in the lime and fertilizer. Seed and roll firm. Lime gets rid of the broom sedge and encourages legumes, which enrich the soil with nitrogen, stimulates the growth of good pasture grasses and increases their protein, mineral and vitamin content. Pastures yield three times more after renovation. Swamps may make your best pasture if ditched or drained and Pasture Mixture 3 sown.

Wood's Grass Seeds are thoroughly re-cleaned and tested, have the highest purity and germination to produce quick stands and vigorous growth of productive, weed-free hay, pastures, beautiful lawns or parks.

Wood's Grain Pasture Mixture

Furnishes more grazing in less time and at less cost than other spring crops. Highly nutritious balanced diet. Cannot cause bloat. Reduces grain feed when costs are high. Saves labor in feeding. Small grains make more growth in cool weather than pasture grass or legumes. Our mixture contains Oats, Rye Grass, Beardless Barley, Wheat and Rye, Dwarf Essex Rape, stays green and palatable in the coldest weather, high in vitamins and relished by all livestock, particularly hogs and poultry. Crimson Clover and Hairy Vetch supply proteins for growth and warmth in cold weather and enrich the soil with nitrogen. The ideal nurse crop for seeding permanent pasture mixtures. Drill 100 lbs. per acre.

100-lb. bag, \$9.00; 5-bag lots, \$8.75 f.o.b.

Wood's Grain Hay Mixture

Makes bumper crops of nutritious hay, easy to cure, relished by all livestock. A balanced ration of protein, vitamins and other food elements. Much more productive and palatable than oats or any other crop sown alone. Ideal nurse crop for seeding permanent grass and clover, as it comes off early. Sow 100 lbs. acre. Fertilize well.

100-lb. bag, \$9.00; 5-bag lots, \$8.75 f.o.b.
